Domains Covered in PL-400

Design Technical Architecture

- Transform functional requirements into a technical design.
- Design and validate the technical architecture for a solution.

2. Configure Dataverse

- Create and manage tables, columns, and relationships.
- Implement security models (Business Units, Teams, Roles).

3. Develop Power

- Create and configure model-driven and canvas apps.
- Implement complex business logic and custom connectors.

4. Extend the Platform with Code

- Develop server-side plugins and custom APIs.
- Create client-side scripts and PCF controls.

5. Implement Application Lifecycle Management (ALM)

- Manage solutions and components across environments.
- Use Azure DevOps for source control and CI/CD pipelines.

Study Tips & Resources

1: Study Materials and Methods

Preparing for the **PL-400 exam** requires structured learning and reliable resources. While Microsoft documentation and official learning paths provide a solid foundation, many candidates find that focused study materials save time and make concepts easier to digest. **SkillCertExams** practice questions align well with the exam objectives and help identify weak areas quickly. A consistent study schedule, reviewing key concepts daily, and revisiting tricky topics with scenario-based questions can ensure steady progress and stronger retention of knowledge.

Practice and Hands-On Experience

The **PL-400 exam tests** real-world application, not just theory. Use **SkillCertExams practice tests** to master exam format and timing. Most importantly, gain hands-on experience by building apps and automating workflows in a Power Platform environment. Combining practice exams with practical skills is key to success.

Key Topics Practiced on SkillCertExam

- Core Power Platform Components & Value
- Building with Power Apps
- Automating Processes with Power Automate
- Analyzing Data with Power BI
- Power Platform Administration & Security

Sample Question – CompTIA A+ 220-1101

QUESTION NO: 1

A user's computer is not receiving a network connection. The technician confirms that the connection seems to be down and looks for the user's port on the patch panel. The port and patch panel are not labeled. Which of the following network tools should the technician use to identify the port?

•A. Network tap
•B. Punchdown tool
•C. Toner probe
•D. Crimper

Answer : A,B,C

QUESTION NO. 2

A company has an application that provides API access. You plan to connect to the API from a canvas app by using a custom connector.
You need to request information from the API developers so that you can create the custom connector.
Which two types of files can you use? Each correct answer presents a complete solution.
NOTE: Each correct selection is worth one point.

A. YAML
B. WSDL
C. OpenAPI definition
D. Postman collection

QUESTION NO. 3

A company plans to create an order processing app. When orders are created, the app will perform complex business logic and integrate with several external systems.
Orders that have a large number of line items may take up to six minutes to complete. Processing for each order must be completed in one operation to avoid leaving records in an incomplete state.
You need to recommend a solution for the company.
What should you recommend?

A. an asynchronous workflow that uses a custom workflow activity
B. a real-time workflow that uses a custom action
C. a webhook that connects to an Azure Function
D. an asynchronous plug-in

Answer : C
QUESTION NO. 4

A company has an application that provides API access. You plan to connect to the API from a canvas app by using a custom connector.
You need to request information from the API developers so that you can create the custom connector.
Which two types of files can you use? Each correct answer presents a complete solution.
NOTE: Each correct selection is worth one point.

A. YAML
B. WSDL
C. OpenAPI definition
D. Postman collection

Answer : C,D

QUESTION NO. 5

A company manages capital equipment for an electric utility company. The company has a SQL Server database that contains maintenance records for the equipment.
Technicians who service the equipment use the Dynamics 365 Field Service mobile app on tablet devices to view scheduled assignments.
Technicians use a canvas app to display the maintenance history for each piece of equipment and update the history.
Managers use a Power BI dashboard that displays Dynamics 365 Field Service and real-time maintenance data.
Due to increasing demand, managers must be able to work in the field as technicians.
You need to design a solution that allows the managers to work from one single screen.
What should you do?

A. Add the maintenance history app to the Field Service Mobile app.
B. Add the manager Power BI dashboard to the Field Service mobile app.
C. Create a r n the Power BI managemen
D. Add the m dashboard.
